

## CLAIM AMENDMENTS

1           1. (original) A high-frequency device for a vehicle  
2 antenna, mountable on a surface of a vehicle, and having a circuit  
3 board (1) with conductive traces and circuit elements and feed  
4 means like wires or sockets, characterized in that the circuit  
5 board (1) has at least one recess (2) extending transversely of a  
6 curved surface (3) for fitting to the curvature.

1           2. (original) The high-frequency device according to  
2 claim 1, characterized in that the number of parallel recesses (2)  
3 depends on the amount of curvature of the surface.

1           3. (currently amended) The high-frequency device  
2 according to claim 1 [[or 2]], characterized in that the recess (2)  
3 is made by milling.

1           4. (currently amended) The high-frequency device  
2 according to ~~one of claims~~ claim 1 [[to 3]], characterized in that  
3 the circuit board (2) is directly mounted on and fixed to a curved  
4 surface (3).

1                   5. (currently amended) The high-frequency device  
2 according to ~~one of claims~~ claim 1 ~~[[to 3]]~~, characterized in that  
3 the circuit board (2) is fixed on the curved surface with  
4 interposition of spacers.

1                   6. (currently amended) The high-frequency device  
2 according to ~~one of the preceding claims~~ claim 1, characterized in  
3 that the high-frequency device is an antenna amplifier.
